

Duell Green's Inc — Full Project Context

For Gemini: consolidated background across everything discussed in this project to date. Use this alongside the separate Gemini workflow note. Updated September 2026.

1. Company Overview

- Duell Green's Inc is the parent company, registered in Alberta and Ontario, operating a portfolio of sub-brands spanning digital commerce, advertising, media, and faith-based initiatives
- The enterprise is faith-based and values-driven
- **Market Guides** (marketguides.ca) — a virtual shopping mall/marketplace, registered as a sole proprietorship. Positioned as a 2026 version of the Yellow Pages, but as an online virtual shopping mall; M.P. Radio is a separate, tied-together advertising stream alongside it. The core differentiator is the experience itself — the immersive virtual mall/tour experience, not just discounts or a listing
- Market Guides is already live and active — established across all social media, with existing real business relationships already in place (not a pre-launch/cold-start situation); belongs to many groups, has 22 five-star reviews on Kijiji, and has an eBay presence
- Immediate next-step plan for Market Guides: update the blog to reflect what's actively happening, put products on Shopify and polish the store's look, start posting video content to build visible momentum, then pitch companies once that traction is visible — also involves the podcast, Bandcamp, prints, an ambassador role, and distribution
- "Walking Ambassador" concept, as an M.P. Productions offering: companies provide gear, promo material, and prints; either a person hired for a set number of paid hours wears/distributes them, or someone incorporates it into their own daily routine — in exchange, companies get the gear/promo/print exposure
- Future idea to deepen the Market Guides experience and increase dwell time: games built in Unity, and possibly a library feature
- **M.P. Productions** (mpro.ca) — a full-service advertising/creative agency with divisions: Planning, Production, Print & Distribution, Shop, and Entertainment
- **M.P. Radio** (mpradio.fm) — a broadcast network for DJs, musicians, comedians, and dancers
- **UV Protech** (uvprotech.net) — umbrella products
- **The Time We Live In** (thetimewelivein.com) — a podcast
- Stealization.com, The Good Sam/Good Samaritan Project, and Godstands.com are additional ventures in development
- Success is defined as a fully integrated, professionally branded ecosystem of platforms, tools, and media properties operating cohesively
- For the educational/interactive games (Bible Story, Trivia, and the language games), only the Beginner tier is free — Intermediate and Expert require signing up or a purchase from the store
- Any client who needs a website built (including their own video page) will pay for hosting, provided through a Verpex reseller account (Start-Up Reseller plan — up to 15 cPanel accounts, 50GB NVMe SSD, unlimited bandwidth)
- Quality is never compromised to reflect pricing — a lower price tier never means lower quality

- Considering an agency-type section under M.P. Productions for freelance creatives (photographers, videographers, illustrators/artists, clothing designers) — a destination for independent artists generally, not a production supply source (in-house green screen/equipment already covers artist funnel production at no added cost); flagged concern this could create competition/undercutting unless tailored appropriately (e.g. price floor not open bidding, curated not open listing); still an early idea. A curated roster of photographers is a separate, distinct thing from this open section, also planned but not yet detailed
- Also considering adding sections for venues/banquet halls and music studios to the platform — both still early ideas, not yet detailed

Current build progress

- Multi-page websites built for M.P. Productions and Market Guides
- 3DVista interactive tools built: moving elevator (including a 20-floor variant with restricted floors), train/streetcar/boat/plane navigation, Book Now hotspot, Listener Station with DJ picker, Floorplan Pro, PDF flip books
- M.P. Radio brand identity built with animated speaker logo variants, plus launch scripts for both M.P. Radio and Market Guides
- Apparel design suite: 20 concepts with full Artistly settings per design; SVG badge designs used for text-dependent graphics
- Interactive children's games built: Bible story game, Brain Trainer, Trivia
- Shopify store live at market-guides.myshopify.com, with M.P. Radio Base and Extra tier draft products created
- Panorama prompts written for Blockade Labs Skybox AI as connected tour sequences
- Boat show vendor outreach under way, with confirmed contacts from exhibitor list research

2. Brand Standards — Colors, Creative & Research Rules

Confirmed and locked color values

Color	Use	HEX	Pantone
Navy	M.P. Productions + Market Guides shared primary	#041E42	PMS 282 C
Green	M.P. Productions third-color set (from real MPPRO logo)	#4CAF50	PMS 7738 C
Gold	Market Guides third-color set, and Penthouse tier	#C9A24B	~PMS 872 C
White	Official third brand color for BOTH M.P. Productions and Market Guides	#FFFFFF	PMS White
Rich Black	Penthouse tier only, paired with gold	#0D0D0D	—

Black+gold is exclusive to M.P. Productions' Penthouse tier and its virtual tour access page — never Market Guides. Seasonal/promotional materials (e.g. Christmas) may shift palette as a deliberate exception; this doesn't change the standing palettes.

Color psychology research (verified) applied to the locked brand colors: Navy carries trust/stability/authority; Green carries relaxation/growth/naturalness, fitting the faith-based/community positioning (with the Coca-Cola "Life" 2013 case on file as a cautionary example of breaking brand color history); Gold carries luxury/premium/achievement, matching its Penthouse-tier use; White carries purity/simplicity; Rich Black paired with gold is one of the most documented luxury pairings, reinforcing why it stays locked to Penthouse only. Widely-cited (non-academic) figures: consistent signature color can raise brand recognition up to 80%; color drives an estimated 60% of snap product acceptance/rejection — the real lesson from both is that consistency matters more than any single color choice. A full standalone guide on this was built, and there are plans to eventually turn this research into a sellable product of its own

Creative and research standards

- All creative outputs (apparel, panorama descriptions, building prompts) must reflect genuine, specific visual concepts — no generic placeholder language
- Research effort should match the shape of the question — direct answers for narrow/single-fact questions, broader research only when the question calls for it

Confirmed technical findings

- Artistly does not support true 360° equirectangular panoramas — 21:9 is the widest, and images warp in 3DVista
- Blockade Labs Skybox AI GLB exports are compatible with 3DVista VT PRO's native 3D model node system (navigation hotspots, First Person View with collision detection, panorama node linking)
- Skybox AI mesh export is experimental and works best near the original generation center point
- M3 Photoreal is the confirmed style for architectural/building prompts in Skybox AI
- In Skybox AI: Remix tab for walk-forward sequences, Create tab for standalone teleport destinations
- Searched specifically for dedicated software to connect panoramas into consistent room-to-room/hallway sequences: confirmed the navigation/linking side is already solved by 3DVista's own hotspot system (no new tool needed there); the harder problem — making two AI-generated panoramas visually agree with each other as if truly adjacent — remains a largely unsolved space; nothing found beats Skybox AI's Remix continuation-prompt approach already on file
- Skybox AI Model 3's "Artistic" style sub-menu is entirely stylized/painterly (Digital Painting, Anime, Dutch Masters, Watercolor, Comic, Storybook, and others) — none suit photorealistic architecture; M3 Photoreal remains the confirmed choice for buildings

3. Organizational Structure & Workflow

- Six operating categories in active use: Budgeting, Marketing, Business Operations, Website & Systems, Outreach & Partnerships, and Equipment & Production
- Logos and visual assets are filed under Website & Systems
- All outputs saved with a comprehensive file manifest, version numbers, and dates

Tools in active use

- 3DVista VT PRO — virtual tour and 3D navigation builds
- Blockade Labs Skybox AI — panorama and GLB mesh generation
- Artistly — apparel design and merch mockups (not photoreal portraits or performance video)
- Shopify — e-commerce (market-guides.myshopify.com)
- Canva / SVG tools — badge and graphic design
- Google Earth — used for cinematic flythrough content via Google Earth Studio
- Google Gemini, used alongside Claude in a multi-model workflow; Higgsfield is planned but not yet acquired
- Payment infrastructure: Wise (with connectable apps), PayPal Business, and Stripe now connected, along with other connectors and Shopify apps
- Standing assumption going forward: builds are targeted at Verpex hosting (the 15-account reseller plan), pulling in whatever's needed from any other software already in use

Multi-model workflow

- Gemini: real-time search, massive-context research, rough prototype code (the Scout)
- Claude: verifies, structures, refines, and builds production-ready output from what Gemini produces
- Higgsfield: dedicated cinematic AI video — consistent AI-cast characters, native synced audio
- Gemini's raw output is never trimmed when handed to Claude — passed through in full
- Gemini's own documents are never edited or added to internally — they stay exactly as written; any additional context goes in a separate document alongside them

4. M.P. Radio Ecosystem

- A broadcast/booking network for DJs, musicians, comedians, dancers, bands, and songwriters
- Bands can upload music for DJs to play, upload videos, and be discoverable/bookable by promoters
- Pricing: DJs at \$20/month recurring; Musicians/Dancers/Comedians/Bands/Podcasters/Songwriters at \$10/month plus 15% booking commission (raised from an earlier \$7 — the increase specifically funds the referral/commission math while keeping the base price attractive); Extra tier confirmed at \$25/month
- Designed so each entertainer type helps the others — DJs playing band tracks, promoters finding talent in one place, bands getting discovered through DJ sets

- DJs playing registered Canadian artists' music generates real SOCAN royalties for those artists — a genuine selling point
- A family discount exists as a feature, separate from the livestream offering, delivered via coupons rather than automatic pricing
- Livestreaming positioned as an additional real income stream for artists
- Considering expansion to Jamaica and the UK; community radio stations noted as another outreach angle
- Real interest already exists — two people were ready to sign up
- Fiverr and Voices.com identified as sourcing platforms and as UX models for the booking site: Fiverr's browse-and-book packages, Voices.com's post-a-job/audition matching — both planned as a hybrid model
- Visual/video asset plan for the booking site: Higgsfield for cinematic video and artist performance clips, Artistly for merch mockups only, Gemini as a video fallback and research tool
- RESOLVED — the multi-level DJ referral idea was set aside after review. Settled on a single-tier "Direct Referral Reward" instead — a flat \$5 cash payout for a direct signup only, with no bonus for anything that person later brings in themselves. This avoids the Competition Act question entirely, since payment only ever flows for a person's own direct action, never for someone else's recruitment further down a chain. Does not require UpPromote's paid Professional tier — the Free plan or Shopify's own native discount codes can run this
- A separate, non-cash "value-add ecosystem" is planned for artist retention/reward — virtual real estate, merch discounts, studio time, Golden Pass perks — delivered for tier upgrades and loyalty, deliberately kept independent of the referral mechanism so it never touches the legal question
- Talent pages structured as: a directory/roster list (photo, bio, links, Buy Dubs button per entry) linking into a fuller profile page (media player or video, dub packages for sale, station/time-slot info, a button into the live station, a separate Buy Dubs button) — same uniform template reused across Artists, Bands, and DJs
- Manager/label signup decided: the manager gets full control over their own registered artists' profiles/roster, and takes a commission on their bookings — Managed artists have no direct interaction with the site or with the owner at all — the manager is the sole point of contact and control for their entire roster. Managers also get a choice of structure: join the shared roster, run as a separate but connected enterprise (not white-label), or get full white-label for the right price — same white-label option applies to artists/bands generally. A custom web page/promo build is also offered for the right price. All these tiers get featured in pitch ads
- Funnel entry point is designed to start low and easy (an accessible monthly subscription) before upselling into higher tiers. Proposal copywriting has two styles: high-urgency ("rush," "buy now") for the initial online proposal, steadier messaging for later/ongoing proposals
- UpPromote remains the confirmed tool of choice for the referral/commission system generally, and its MLM/multi-tier features remain available if a real multi-tier structure is ever built later — but that is not the current plan, per the resolution above
- Relaunch ads specifically follow the story/movie concept (same as the overall cinematic approach) — style open to cinematic realism, anime, or whatever fits best

- Market Guides will also quietly run a job-placement service without branding it as "an agency" — when pitching client companies, part of the conversation covers their hiring needs (role, pay, etc.), the same model M.P. Productions already uses for modeling-style work (headshots, promo materials)
- Campaign idea: "Protected By New Era" — a potential sponsorship tie-in with New Era Detroit (a real Detroit community organization/nonprofit doing genuine security/anti-violence work), to appear after Scroll World's opening web experience, as a transition/sponsorship moment. Real contact found: phone 313-466-4377, website neweradetroit.com
- Arcade room within the tour: real playable games, monetized via subscriptions sold through both the tour and the website, using the same account/login as Trivia and Brain Trainer's paywall. Full vision: Pool, Snooker, Darts, and Pinball, with a game-selection menu, 1-player difficulty levels, a tournament mode, a music on/off toggle, and sound effects. Pool + Snooker (possibly more) planned as a bundle sold as a higher-priced tier within the tour
- Confirmed paywall rule: no paywall applies to the Bible Story game or anything Godly/faith content, which stays fully free. For Trivia and Brain Trainer specifically, only the Beginner tier is free — Intermediate and Expert require signing up or a store purchase
- New arcade game ideas: an original Call of Duty-style game (not using COD's actual name/branding — same approach as Turbo Karts staying clear of Mario Kart's IP) and an Adventure-style game, both planned for the M.P. Radio arcade
- Pool built and tested (self-contained HTML/JS, no Unity needed) — genuine bugs found and fixed during testing: a resting-contact ball-jitter bug that prevented turns from ever settling, a CSS rule that accidentally styled the confetti canvas with the pool table's felt color, an inverted aim-guide line, and a broken foul/re-rack rule set. Chosen build sequence: finish Pool completely first and test thoroughly, then Snooker (reuses Pool's tested physics engine), then Darts and Pinball (separate builds), then the shared menu/tournament wrapper last
- Pool's full confirmed feature set: 1-Player Practice (with break-shot re-rack on no contact), 2-Player Hotseat (alternating breaker each new game, proper no-contact fouls that leave the cue ball in place, scratch respotting), Points Challenge (its own difficulty-scaled scoring — 50 base + up to 100 distance points + 40 per cushion bounce + 300 for finishing on the 8-ball, plus its own separate high score), a persistent per-device high score with genuine confetti on a new record, a player-controlled music toggle, synthesized sound effects (including a realistic noise-based ball-click replacing an earlier tone-based sound), and real Spin/English: a tap-to-select cue-ball diagram enabling follow, draw/backspin, and side-spin (English) off cushions — all three effects individually verified through direct physics testing
- Snooker built and tested: reuses Pool's proven physics engine; real 22-ball setup (15 reds, 6 colors on correct spots); genuine rule enforcement for red/color alternation, color re-spotting while reds remain, the colors-in-order endgame (yellow, green, brown, blue, pink, black), fouls for wrong-ball-type and multi-ball-type shots, and frame-ending score comparison — all verified directly, not just built. Uses its own distinct confetti palette and audio tuning from Pool, per the standing per-game-distinctness rule
- Darts (501, double-out) built and tested: correct real dartboard segment order and scoring math verified at precise coordinates; correctly enforces that only the true bullseye (50), not the outer 25, counts as a valid double-out; all three bust rules verified (overshoot, landing on exactly 1, finishing on a non-double); difficulty genuinely scales throw precision (Hard measured at ~3.4x Easy's scatter)
- Pinball built and tested, after a genuinely difficult debugging process (documented honestly): fixed a broken launch control (drag-tracking was scoped to the canvas element, not the page), a missing physical wall between the launch lane and the main field, insufficient launch velocity to reach the field,

and bumpers not positioned on the ball's real trajectory. Added a variable-strength flipper control (press and drag inward to charge power, verified with real measured differences between a light tap and a full charge). Found and fixed a second real bug where flipper rest/active angles were inverted (drooping up instead of down, swinging down instead of up) and a third where flippers only animated while a ball was active. Redesigned visuals with a branded "M.P. RADIO" marquee header and real pop-bumper graphics (metallic ring, point-value labels, hit-flash) in place of flat colored circles, specifically to look like a real, sellable machine

- An "M.P. Radio Arcade" hub page was built linking all four games under one branded front door. Honest limitation on file: each game currently keeps its own separate high score (isolated per published page) — a true shared cross-game leaderboard, needed for the "businesses give prizes to top scorers" idea, requires either a real backend or merging all four games into one consolidated file; not yet decided which
- A fifth arcade game, "Sling Smash" (an original slingshot-physics game — same genre as Angry Birds, but with its own name, characters, and visuals, not the copyrighted ones), was built and tested. Two genuine bugs found and fixed: a premature-bounce bug where dragging the ball near the ground during aiming caused it to lose most of its power the instant it launched, and a level-design flaw discovered while fixing that bug — the slingshot itself was positioned too close to the ground, leaving no real room for a full-power arcing shot, fixed by raising its height
- Plan going forward: once the Claude subscription is increased, build many more games, with a specific focus on popular games from the 1980s — not yet scoped or started
- Mixcloud exposure strategy built, based on Mixcloud's real current features: Host Tagging (a Pro feature letting one upload appear on both the station's and the specific DJ's profile simultaneously, notifying both audiences at once), genre tags (up to 5 per show, engagement-weighted chart ranking), Mixcloud Posts (built-in community/bulletin feature), and Stats (Pro tier — audience location and content performance data)
- Confirmed: the Claude subscription was increased and laptop/browser access was discovered, superseding the earlier phone-via-Dropbox-to-Mac-only workflow. Clarified for planning purposes: Claude.ai chat (used throughout this entire project) is the same core experience on mobile and desktop; Claude Code (needed for the shared leaderboard, Manager QR, and CP24 backend builds) is a genuinely different product requiring the Desktop app's Code tab or a terminal — it cannot be run from this chat interface regardless of subscription tier, since this chat's environment has no persistent hosting or deployment capability
- A Claude Code brief was written for the first of the three planned backend builds — a shared, persistent leaderboard across all five arcade games (Pool, Snooker, Darts, Pinball, Sling Smash), chosen to go first specifically because it's the smallest and most self-contained of the three (no payment integration, no third-party API, no multi-tier permissions), intended as a first deployment to Verpex hosting that proves the pipeline before the bigger Manager QR and CP24 systems
- Connected a Chrome-related tool for easier boat show vendor number lookup — clarified this is a separate browser-based tool (Claude in Chrome) from this chat interface and cannot be operated from within this chat
- Reviewed two Gemini-produced documents (a "Global Master Playbook" manifesto and a "Strategic Analysis" briefing) against the actual original raw request that was sent to Gemini. Found several specific numbers and claims in both Gemini documents that do not trace back to the original request and in some cases contradict already-confirmed facts — most notably a 25%/15%/10% MLM commission split (contradicting UpPromote's own documented 5%/4%/2% example), an entire wedding

production service line with specific pricing (\$2,499/\$3,999 CAD) not present anywhere in the original request, named specific district managers presented as already confirmed when the original request only expressed intent to find managers with no names given, and a \$10/\$35 prepaid media-blast pricing mechanic not present in the original request. Also flagged a recurring pattern in both Gemini documents describing grant funds being deliberately concealed from public view to cover internal invoices — treated as a real compliance concern needing actual review, not a business strategy to file as fact. Three annotated documents were built for review: the original request verbatim (with Claude's own analysis added), and the manifesto and briefing each with unconfirmed passages boxed and Claude's notes below each one

- New direction: wants M.P. Radio built in a CP24-style format (Toronto's Bell Media 24-hour channel) — a multi-panel visual layout (main feed plus simultaneous side panels for headlines/weather/ticker-style info) combined with rolling entertainment/lifestyle content, not just audio. Explicitly framed as a path toward eventually turning M.P. Radio into a TV station too, since that visual format is inherently video-based from the start rather than needing a separate build later
- Draft daily programming schedule for the CP24-style video format: children's videos from 6am-12pm, then nature content afterward; audio radio plays throughout but can be turned off in favor of the video; within these time blocks, posters/ads and performances can appear; the arcade games are also part of the mix, specifically to keep viewers/listeners on the platform longer
- Backend requirement for the CP24-style TV screen: needs the ability to upload videos and graphics directly to that screen, and potentially grant access to someone else in the future to also upload content — a genuine multi-user content management need, reinforcing the standing conclusion that the shared leaderboard, the Manager QR system, and this all point to needing one real custom backend, not separate one-off builds
- Ticker content refined: good news from around the world only, multi-language, plus weather and stock information — written in the accessible, punchy style of the Sunday Sun, but with the journalistic substance/credibility of CBC
- Confirmed: this is a complete TV station, not just a video-enhanced radio format. Planned sections so far: a children's section named "Fantasy World," an arcade section, and at least one more section still to be decided. Also confirmed sellable/relevant to performers themselves, not just viewers
- Considering a multi-language singer service via Mureka (the Suno competitor already confirmed on file), leveraging Mureka's verified strength in multilingual accuracy
- Considering an online karaoke feature via Zoom (or similar video conferencing), paired with a synced-playback method (e.g. Watch2Gether-style) for the backing track/lyrics — tied to the existing theatre/stage booking option, with Mureka potentially generating multi-language instrumental backing tracks on demand as a differentiator beyond existing YouTube karaoke content
- Considering Bigo Live as a real revenue stream — verified findings: a real official Agency/Reseller program (five tiers, \$145-\$2,950 registration, all figures confirmed in USD), hosts earn a share of gift/diamond revenue. Commission percentage has an unresolved discrepancy between sources (20-40% vs 20-55%) — confirm directly with Bigo before quoting either figure. Decided: performers charged via a higher subscription tier for agency access/coaching, not a separate flat fee. IMPORTANT: white-labeling, embedding the stream on the M.P. Radio page, and automating splits via UpPromote were all checked and do NOT hold up — no evidence of a white-label option, no evidence of a third-party embed API, and no technical connection between UpPromote and Bigo exists at all
- Has submitted a Bigo Live agency application; leaning toward Aura Talent (Toronto-based, Canada/US/UK) as a possible outside agency, not yet committed; plans to bring in a Jamaica-based

person under their own agency once approved. Confirmed via direct account observation: following back a Fan converts it into a mutual Friend — a real, easy onboarding tip for the roster

- New idea, sparked by discovering a talented singer on Bigo Live: once agency status is approved, district managers can actively scout and recruit talent found on Bigo itself as a real, additional recruitment channel — dependent on agency approval first. A training manual/PDF is planned to teach district managers how to actively find more artists, tied directly to increasing their own earnings
- Reconsidering whether the manager/district-manager tier is even needed now that MLM is not being pursued — still an open question. District manager compensation options logged: a flat stipend for compliance work, a cut of actual regional ad revenue, the same flat \$5 referral fee as anyone else, or non-cash value-add perks — pay must always tie to their own real work or a real transaction, never to someone else's recruitment
- New store idea: a dedicated section where entertainers can sell their own music, comedian soundtracks/sets, dubs, and merch directly
- New idea: once entertainer MP3s are collected, remix them together — including comedians, not just musicians — and weave the remixed content into the actual broadcast itself, not just sell the tracks standalone
- Refero (a web/iOS-focused design reference tool, verified stronger fit than Mobbin for this build's actual content) is now connected via its official Claude Skill and MCP server. Calendly is also available as a tool on hand
- A sixth arcade game, "Turbo Karts," was built and tested — an original kart-racer (same genre as Mario Kart, original characters/track, not the copyrighted ones), rebuilt with a real behind-the-kart 3D-perspective view after initial feedback, with Automatic/Manual driving modes, Tournament/Quick Race modes, 5 Canadian-themed tracks, and "Dino Police" hazard characters throwing spike strips
- Opened a real business bank account with TD
- Real technical finding: SPF, DKIM, and DMARC email authentication are now enforced by Google/Microsoft as of their 2025 policy updates — missing setup can cause outright email rejection, not just spam-folder placement. A dedicated IP add-on (~\$10/month) was added to the Verpex hosting checkout specifically to protect email reputation from other, unrelated sites sharing the same server
- CORRECTED legal note: as an Alberta/Ontario-registered business, Canada's Anti-Spam Legislation (CASL) applies, not the US CAN-SPAM Act as earlier stated. CASL is materially stricter — it requires opt-in consent BEFORE sending (the opposite of CAN-SPAM's opt-out default), implied consent expires after 2 years, and penalties run up to \$10 million CAD per violation. Transactional email (royalty statements, order notices) stays exempt, but any promotional email needs real documented consent
- New domain/URL structure idea: use subdomains (e.g. entertainer.mpradio.fm) as a sellable premium upgrade for individual entertainers, instead of a plain URL path (mppro.ca/entertainer) — real technical trade-off noted: a subdomain feels more personal/premium but starts with less inherited SEO authority than a path, which is exactly why it's a legitimate paid upgrade rather than the free default
- Higgsfield's purchase is sequenced for once Wealthsimple funds/revenue actually come in, not immediately — Gemini can still research and prepare all Higgsfield-dependent ideas in the meantime
- New creative idea for entertainer-facing ads specifically (digital or print): a Christmas-themed color palette with messaging positioning the platform as "the gift they've been waiting for is finally here" — fits the already-established seasonal-palette exception to the standard brand colors

- Confirmed: the proposal presented to companies must explicitly include a real option for a custom AI chatbot built for them, as a genuine sellable service — a real line item, not just a background possibility. Per the standing branding rule, this should be marketed by what it does (answers customer questions, captures after-hours leads), never with the phrase "AI-powered" itself
- New idea: pick 3 already-researched boat show vendor companies and rebuild/remake their websites as a real demo of M.P. Productions' design services. Also considering 3 generic "wow" demo sites for other industries (boat industry, plus businesses referred to as "CSCS" and "Onyx Barbers") to put up for sale as ready-made options. Additional candidates for the demo list: carcone.com, GTA Exotics, and possibly an Electrolux teaser
- CORRECTED: Fantasy World's location moved from M.P. Radio's CP24-style TV station to Market Guides instead
- New concept, SETTLED name: "Market Guides Television" — a separate CP24-style channel under Market Guides, no entertainers, good-news content only. Spelled out in full (not "TV") to lean into the classic TV Guide-era feel that inspired the name and to match the fully-spelled naming convention already used across Market Guides, M.P. Productions, and M.P. Radio
- CLARIFIED: "MPTV" is a separate, distinct concept from Market Guides Television — MPTV is M.P. Radio's own video/TV transformation (the original CP24-style multi-panel format, WITH entertainers, that turns M.P. Radio itself into a TV station), branded under the M.P. umbrella. Deliberately held back from any public use until it can be properly registered
- New idea: a restricted, age-gated area (18+ confirmation, explicit-content warning) for explicit-lyric content, paired with a Bible verse about the tongue (likely James 3) as a thematic warning. Standing rule: no lyrics about killing, with one exception under discussion — dubplates — though the exact boundary (personalized dub vs. public release; competitive clash bravado vs. a literal threat) isn't yet defined. Open question: whether judging that line becomes another real district manager duty
- Reconsidering the manager/label tier and district manager roles now that MLM is not being pursued (settled on a flat \$5 single-tier referral instead) — may have no current need for managers; district manager roles, pay, and how to make the role enjoyable remain an open question, though a real starting point already exists: they're already assigned content moderation for the patron backend and compliance/broadcast-standards oversight
- District manager compensation options logged for near-future decision: a flat stipend for the compliance/oversight work itself; a cut of actual ad revenue booked within their region; the same flat \$5 direct referral fee anyone else earns (no override on downstream signups); non-cash value-add ecosystem perks (Golden Pass, virtual real estate, priority booking) as recognition. Standing rule: pay must tie to the district manager's own work or an actual transaction, never to what someone under them recruits
- Pool now includes: 1-Player Practice mode with three difficulty levels (aim-guide length varies), 2-Player Hotseat mode, sound effects and a player-controlled music toggle, and a persistent high score (saved per-device) with a genuine confetti celebration when a record is broken
- Score tracking (including high scores) is a real business requirement: businesses can give away merch or discounts to high scorers, tying the arcade games directly into the vendor program's incentive structure and an engaging funnel, not just entertainment
- Planned Pool variant: a "Points Challenge" mode awarding points per ball potted, scaled by shot difficulty — a separate option from standard 8-ball, for competitive score-chasing tied to prizes

- Standing priority: Higgsfield credits are budgeted toward the Scroll World sites first, as the most important use of Higgsfield for the first month — other creative tools can still be used elsewhere, but Higgsfield spend outside Scroll World stays conservative until that priority is established
- Confirmed: Scroll World applies across the different sites (M.P. Radio, Market Guides, MPPro), not just one single build
- Three visual concepts logged for the M.P. Radio scroll build specifically: (1) a modern "Mr. Personality" hero character (the real 2008 Rock-a-Way co-host name) who guides the visitor through key scroll transitions — arriving at the building, opening the first door, entering the main hall — styled with throwback cues that modernize as the scroll progresses, kept visually consistent via Higgsfield's Soul ID, positioned to eventually deliver the Good Sam reveal; (2) a vehicle traveling around the city/virtual city, tied to the Market Guides/MPPro transportation connection; (3) a broadcast signal/soundwave traveling from a transmitter tower across a city skyline into different points (a car radio, a bar, a home window) — none yet chosen, may be combined
- Domain structure: three real domains (mpro.ca, marketguides.ca, mpradio.fm). New idea: sell subdomains (e.g. entertainer.mpradio.fm) as a premium upgrade for individual entertainers instead of a plain URL path — trades some inherited SEO authority for a more personal feel, which is exactly why it's positioned as the paid option rather than the free default
- Three visual concepts logged together for the M.P. Radio scroll build specifically, to compare/combine/choose from: (1) a hero character — a modern version of "Mr. Personality" (the real Rock-a-Way co-host name), guiding the visitor through key scroll transitions, kept visually consistent via Higgsfield's Soul ID feature, positioned as the natural figure to deliver the eventual Good Sam reveal; (2) a vehicle traveling around the city/virtual city, tied to the Market Guides/MPPro transportation connection; (3) a broadcast signal/soundwave traveling from a transmitter tower across a stylized city skyline into different points (a car radio, a bar, a home window) — tying the visual directly to what radio literally does
- M.P. Radio will have its own .fm domain while remaining a genuine part of mpro.ca — will need substantial backlinking between the two for SEO
- Promoter booking flow: promoters browse profiles and fill out a request form; the request goes to the owner first, who then forwards it to the entertainer — not direct promoter-to-entertainer contact
- Standing rule: always clearly separate the broadcaster/performer side from the listener side in any pricing or platform discussion
- Annual payment perk: DJs/musicians who pay annually get one included professional recording session using the real 4-camera multi-angle setup — this means the equipment must be shown/displayed publicly, not just documented internally
- Livestreaming pricing model still undecided between three options: labor-time-based pricing, self-serve DJ streaming (removing the labor constraint), or percentage-based pricing (a cut of platform-driven earnings) instead of a flat fee
- Payment-splitting/referral tool resolved: UpPromote is the confirmed tool for booking commissions, referrals, vendor splits, and dub plate revenue. CollabPay and GrooveSell/GrooveAffiliate were both earlier candidates and are no longer in use. Supercast was also raised as a possible tool in an earlier chat and left open/undecided rather than ruled out
- UpPromote confirmed capabilities (verified directly): unlimited sub-affiliates/MLM depth (no cap on levels or width — e.g. a 3-level chain earning 5%/4%/2% down the line is UpPromote's own documented example); a native "Network" dashboard tab per affiliate showing upline/downline and

network commission once MLM mode is enabled; automatic QR code generation from an affiliate's referral link (added Jan 2026); an automatic, editable welcome email sent to every new approved affiliate; a real developer API (aff-api.uppromote.com) plus webhooks (referral.new, referral.approved, affiliate.new, etc.), available from the Professional plan (\$89.99/month) and up; a Free plan exists (unlimited affiliates, 200 referrals/month, coupon tracking, fraud protection) but does not include the API or full custom-domain white-labeling — "Custom affiliate link" is confirmed as a Professional-tier feature specifically; a third-party (non-Anthropic-official) MCP server for UpPromote exists with list-affiliates/coupons/referrals tools, relevant only in a Claude Code context, not this chat

- UpPromote is NOT reachable through Zapier (confirmed via direct search, both by name and by the "affiliate" category) — no automation path exists there. Rebrandly (a branded-link/QR tool) IS available through Zapier with real read/write actions, and has its own free tier (1 custom domain, unlimited clicks) plus a \$14/month Essentials tier — the practical branding stack is UpPromote (tracking/commissions/MLM) underneath, with a Rebrandly-branded link as the visible face of it and the QR code generated from that branded link instead of UpPromote's own
- Standing goal: every manager/artist dashboard, including UpPromote's own stats and network view, must be rebuilt inside the platform's own custom backend so no one ever has to leave to log into UpPromote (or any third-party tool) separately — technically achievable since UpPromote's real API/webhooks exist, but this is a genuine custom backend build (Claude Code territory), not something built in this chat
- Referral commission is not limited to managers — artists, bands, and other entertainer types can also earn commission for signups they bring in, opted into via a question presented during their own initial signup flow
- Podcasters are also part of the \$10/month plus 15% booking commission tier, alongside Musicians/Dancers/Comedians/Bands/Songwriters
- A sponsor pitch demo page was built showing the win-to-sponsorship mechanic as a 3-step story (a player wins, hits a new high score, a sponsoring business discount unlocks automatically) for pitching prospective business sponsors on the arcade leaderboard model. A matching one-page scoring reference sheet was also built for the same purpose
- Rock-a-Way is a real event series personally created and hosted starting in 2008 (see Section 12) — M.P. Radio is a revival/modernization of an 18-year-old real community, not a new invented brand
- Launch plan: a countdown timer on the web page for artist sign-up, plus a separate countdown timer for the launch itself; marketing mix includes thousands of physical flyers distributed across the city, digital ads, and organic promotion
- Pre-launch plan: create prints and heavy physical distribution even before the launch itself; companies and artists may get the opportunity to sponsor these pre-launch ads/prints for money — another incentive to use when pitching them
- Overall creative approach: everything is cinematic storytelling, like a movie — the Scroll World/Higgsfield technique is meant to create excitement even before a visitor signs up; Market Guides may reveal, subtly, near the end of the experience that all of this was built just to help others — the moment the Good Sam initiative "was born"
- Full funnel vision for artist/DJ signup: a virtual studio generated via Blockade Labs and customized in 3DVista, professional photoshoot, video production, and a livestream setup on the production side; SOCAN registration under M.P. Productions, FACTOR revenue/gig access, and licensing handled on the business side; Mixcloud integration and interviews via The Time We Live In on the distribution side;

existing pricing, manager accounts, and merch capability on the revenue side — every step intended to feel irresistible, not just functional

- Funnel mechanics: initial signup is basic onboarding only; every add-on beyond that is a one-time-only upsell with its own countdown timer, never offered again once passed; an exit-intent trigger (mouse moving to leave the page) offers a further discount at that moment
- Verpex hosting not yet acquired — identified as needed to get the exact custom/dynamic build wanted rather than working within a platform's limitations. Currently livestreams via YouTube, Twitch, Instagram, and Facebook; an OSEE live-stream switcher (e.g. the GoStream line) is planned for future acquisition for a more professional multi-camera setup

4a. Market Guides Vendor Program

- Companies pay for exposure on Market Guides, structured as a funnel-type setup (same tiered/upsell model as the artist signup funnel) — this is the actual payment mechanism
- Offering a discount to the Market Guides community is something companies can choose to do, not a requirement and not how they pay for exposure
- Menu of benefits companies can get: a virtual booth (fully loaded or basic, potentially including an AI chat assistant/"human bot", direct-call capability, or online chat), purchased commercials or commercials given free within funnels, interviews, merch giveaways, a coupon printed in the physical coupon booklet, and discounted M.P. Productions services
- Vendor program participation is opt-in — only if the company wants to

5. Independent Record Label

- Operating a newly registered Ontario sole proprietorship as an independent record label, under \$25,000 revenue
- Revenue model spans live performance income (fees, door splits, merch, SOCAN live royalties) and recording income (streaming/download payouts, mechanical royalties, neighbouring rights, sync licensing)
- Standard artist agreement: 50/50 shared ownership of master recordings; artist retains 100% of songwriting/publishing rights; label holds exclusive worldwide distribution/admin rights for 3 years; master revenue split 50/50 with bi-annual payout statements
- Masters registered with Connect Music Licensing (label side); artists individually register for neighbouring rights collection with ACTRA RACS, Artisti, or Re:Sound directly (MROC has wound down and no longer accepts registrations)
- SOCAN acquired CMRRA in July 2026 — mechanical/performance rights administration is consolidating under SOCAN
- Grant strategy targets FACTOR (Artist Development, Juried Sound Recording) and Ontario/Toronto Arts Council programs, with a prepared partnership-description template for jury applications; exact dollar caps should be re-verified on FACTOR's site at application time
- Bi-annual royalty statements paid via Interac e-Transfer, staggered across multiple days to stay under per-transfer and daily bank limits
- Tax compliance tracked via CRA Form T2125, with deductible categories logged (advertising/marketing, professional fees/software, equipment/studio costs, travel/vehicle, production fees, business-use-of-home)
- Catalog metadata spreadsheet fields: Track ID, Song Title, Artist/Band, Release Date, Release Type, ISRC, UPC, Composer(s), Master Splits %, Audio File Link, Artwork Link, SOCAN Work ID
- Web payout calculator (HTML/JS embed) and matching 3DVista hotspot script built, both calculating 50/50 net splits after fees
- Already has a CD Baby account for distribution
- CD Baby's real additional services confirmed (beyond basic distribution): CD Baby Pro (publishing administration, mechanical royalty registration with The MLC, sync licensing pitching for TV/film/ad placement), Social Video Monetization (passive income when tracks appear in

TikTok/Instagram/YouTube content), and physical CD/vinyl manufacturing — worth confirming exact current terms directly with CD Baby, since their standalone "Pro Publishing" tier was discontinued in 2023 and may work differently now under the current "CD Baby Pro" name

- Businesses with real foot traffic (e.g. bars, positioned as a walk-in stop between train stations) can be sold a higher-priced vendor funnel tier; the pool game can then be offered as a further paid add-on option deeper in their funnel
- PRODUCTION PACKAGES — full pricing structure (built as its own PDF, restated here so it's not orphaned): verified 2026 market-rate a la carte pricing — voice-over 30-sec commercial \$40-80, VO corporate/promo 2-3 min \$75-150, VO documentary narration/hr \$200-350, vocal mix and polish \$68-183/hr, photography session \$200-1,200, videography 4-camera rig \$108-408/hr plus editing \$68-183/hr, drone add-on \$150-400/hr, Full-Page Mini-Magazine Print Feature \$150 (locked). Mureka-assisted backing track \$40-75/track is explicitly UNVERIFIED (genuinely new service, no market comparable). Three bundled tiers: Starter "Get Heard" \$75 (30-sec VO plus Mureka track; real value ~\$80, priced near break-even, flagged for a possible \$65-70 re-price); Core "Studio Ready" \$250 (vocal mix plus promo VO plus photo session; real value ~\$343, genuine ~27% discount); Signature "Full Spotlight" \$750 (full video plus drone plus narration plus 2 vocal mixes plus print feature; real value ~\$1,096, genuine ~32% discount). Funnel: \$10/\$20/\$25 base entry, then Starter as a one-time-only OTO with a countdown, then Core as a second OTO, then an exit-intent discount, then Signature as a standing offer that is never time-pressured
- Four PRO (performing rights organization) registration guides built and verified: SOCAN (Canada), PRS for Music (UK), ASCAP/BMI (USA) — all three confirmed against current official processes, including live performance setlist-reporting and livestreaming royalty mechanics; JACAP (Jamaica) is honest about a real gap — its structure and function are confirmed, but no public step-by-step application process could be found, so that guide recommends contacting JACAP directly rather than inventing steps
- "Full Release Package" bundled service concept, with a one-pager built: record (existing studio) → mix/master (Vocalator Pro for vocal tuning, Anarchy Comp for dynamics) → distribute (CD Baby) → register for royalties (CD Baby Pro) → pitch for sync (CD Baby Pro) → bonus passive income (Social Video Monetization) — sold as one offering to both label-signed and outside unsigned artists, positioned as a potential OTO upsell tier in the artist-signup funnel

6. Scroll-Cinematic Website ("Scroll World")

- A website technique where scrolling drives a cinematic video animation (the technique behind Apple's product pages)
- Confirmed pipeline: Higgsfield generates a cinematic hero image plus 3D video clips (360° spins, fly-throughs) → frame extraction → a scroll-scrubbing JS engine (Lenis) maps frames to scroll position → a complete branded multi-section site
- Confirmed real GitHub repositories exist for this technique: scroll-cinematic-claude, higgsfield-website-skill, scroll-world, among others
- Cost: a streamlined build (one hero + two clips) runs roughly \$1-2 in Higgsfield credits, ~10-15 minutes; a larger six-scene build runs ~800 credits
- This workflow requires Claude Code specifically (via Higgsfield MCP integration) — it does not run in the standard chat interface

- Potential application: an MPPRO or Market Guides homepage where scrolling cinematically walks a visitor through the building/tour before they click into the full 3DVista experience
- Status: Higgsfield MCP not yet connected/purchased — planned, not active

7. Skybox / 3DVista Marketplace

- Generating AI skyboxes (360° panorama images) using Blockade Labs Skybox AI (Model 3 styles) and Artistly.ai
- Current plan only allows the Fast generation setting, not Standard or Enhanced, without upgrading
- Goal: sell these skyboxes on the 3dvista Marketplace (market.3dvista.com)

7a. 3DVista Virtual Tour Assets — Purchased & Custom-Built

Purchased asset — assigned to Market Guides

- "Virtual Exhibition Hall (All in one)" — purchased from the 3dvista Marketplace: 11 panoramas across 7 trade show booths/stands, 8K resolution (upgradeable to 16K), sold as a full 3DVista VTP project file
- The trade-show/vendor-booth format matches the Market Guides marketplace concept, so this is assigned to the Market Guides side of the connected tour

Custom-built asset — assigned to M.P. Productions

- A two-story MPPRO office tour: outside pano → main office → three doors (Generator Room, Parking Garage, further in) → elevator to production floors → roof/helipad → basement → forest → water/boat
- The Generator Room and Parking Garage panoramas are real photos from an actual job site, not AI-generated — genuine, free, accurate content
- An airport connection is planned but the method is still undecided (possibly via a train station)
- A real TTC streetcar segment is planned, to be captured with the person's own Osmo 360 camera rather than AI-generated, for authenticity on a vehicle interior people would recognize
- Some buildings in Toronto have many floors in the production-floor category — relevant to the 20-floor elevator tool already built
- New idea: a themed virtual room styled after an aquarium (like the one in downtown Toronto, but virtual/original) — either generated via Blockade Labs Skybox AI or built by repurposing the cinema rooms already on hand, as a distinct destination within the tour
- Google Maps' Aerial View API (one-click cinematic flyover video from an address) is confirmed US-only per Google's own current documentation — not usable for a Toronto/Mississauga address. Google Earth Studio (free, browser-based, manual keyframe animation) can produce a similar cinematic flythrough for any location worldwide, though commercial use may need a broadcast license — intended for the website's opening/landing page specifically, not the sales funnel sequence. Already has access to Google Earth
- Additional wow-factor ideas for the tour: a Hall of Fame room for top arcade scorers, top-performing vendors, and top-booked DJs; time-of-day dynamic lighting (different Skybox variants swapped based on real time of day); a "LIVE NOW" glow on the DJ booth during actual broadcasts with the live audio embedded in that room; a hidden bonus room unlocked only by hitting a real arcade milestone, leading

to an exclusive discount or tying into the Good Sam reveal; a physical-to-virtual QR bridge at the real venue that pulls up that exact room on a visitor's phone before they walk in

- Separate revenue idea: selling the already-built and tested interactive tools (the arcade suite, the elevator system) as licensable products on the 3DVista Marketplace to other tour builders worldwide — a distinct customer base from M.P. Radio's own operations

8. Equipment & Production

Video & photo (owned, not rented or subcontracted)

- 4-camera multi-camera rig — simultaneous side-mounted and forward angles
- Drones for aerial event/property coverage
- In-house editing
- Capabilities: product photography, 360° spin video, virtual 360° tours linked directly to Google Maps listings

Print production (in-house)

- Saddle-stitched booklet printing and finishing
- Business cards, flyers, and the Market Guides coupon booklet (distributed monthly)

Music / home studio

- Zoom R24 — multi-track recorder/interface/mixer, battery-powered and field-recordable, also usable as a DAW control surface
- Akai Pro XR20 — portable beat production center (700+ sounds, pads, built-in reverb/EQ/compression, mic input for mixing vocals over beats)
- 3 keyboards, guitar, bass, many hand drums, with additional gear in a second room not yet fully catalogued
- Two-room studio setup — one room is acoustic-treated and used for both podcast vocals and live instrument recording

Working setup & software

- Currently working primarily from a phone via Dropbox to a Mac; a computer upgrade is planned once business income begins
- Also has a printer (model not yet specified)
- Recurring software/subscriptions on record: Shopify, Live365, Mixcloud; Higgsfield is planned but not yet acquired
- Studio software: Vocalator Pro (vocal tuning/processing) and Anarchy Comp (dynamics/compression) — used for mixing/mastering, directly relevant to the Full Release Package concept

9. Published Content — Ebooks & Blog

- Three complete, real ebooks written for Market Guides (full chapters, not outlines), each scoped specifically to Market Guides' actual audience (local vendors and small business owners) rather than generic versions of trending topics:
- **AI Tools for Local Small Business Owners** — the #1 trending non-fiction category at time of writing (45,000+ monthly searches)
- **From Side Hustle to Storefront** — a career-transition topic that directly mirrors Market Guides' own mission

- **Simple Money Systems for Small Business Owners** — personal finance, scoped to this audience specifically
- Topics were chosen against real 2026 ebook trend research, not guessed — the research showed role-specific, narrow topics outsell generic ones by 3-5x
- Artistly book-cover prompts written for all three, in the confirmed navy and gold brand colors
- A blog post announcing the shop launch was written to accompany the ebooks and apparel line on the Market Guides site
- Status: ebooks and cover prompts are written; covers still need to be generated in Artistly before publishing

10. Interactive Tool Library (.jsx Tools)

52 .jsx interactive tool files built for the 3DVista tours and standalone use, organized into one downloadable ZIP, with individual instruction PDFs bundled separately. All 215 total output files across the project are organized into 13 thematic ZIPs plus one complete master archive.

Elevator family

- 20-Floor Elevator — Basement, Lobby, Lounge, 9 restricted filler floors, the 5 real MPPRO categories, Penthouse, and Roof, with real floor-locking
- Elevator Pro (10 floors) — fully customizable with a real color-editor system (shaft, doors, accent, border, text); the version built for reselling
- Elevator — Penthouse Edition (Black & Gold) — for the premium tier specifically
- Elevator — Penthouse Edition (Blue & Green) — standard MPPRO colors, for any context outside the specific Penthouse/premium page
- Elevator — Floors Edition and Rooms Edition (both editable) — same mechanics, different terminology
- Moving Elevator (Original) — the first concept, before the editable/color-customizable/Penthouse versions

Transportation navigation

- Train, streetcar, boat, and plane navigation tools — each with real pointer-based dragging and distinct vehicle-specific visual details

Radio & audio

- Listener Station — a persistent DJ-picker widget for the Market Guides tour, functioning as an overhead PA system playing as visitors move through the space

Documents & reference

- PDF Flip Books (both brands) with real logos embedded
- Floorplan Pro

Educational games (six total, two formats each where noted)

- Bible Story Game, Trivia Game, and Brain Trainer — each converted into a standalone website version and a compact 3DVista overlay version
- Three original language games built from scratch: Spanish (flip-card, Beginner/Intermediate/Expert), Farsi (multiple-choice with pronunciation audio, three tiers), Chinese (drag-and-drop character matching with real pointer events, three tiers) — all three include lesson screens before quizzes and genuine vocabulary progression at each level

Apparel

- 20 apparel design concepts, research-backed against real 2026 trend data from Gelato and Printful — 5 of the original designs were replaced after failing to connect to verified trends

11. Operating Standard — Working Principles

An 11-principle document ("How This Works") capturing real, specific patterns worked out across this project — not generic best practices. Selected principles most relevant for Gemini to know:

- Verify before claiming something is fixed or complete — check the real file/output first
- Do real research before creative or factual claims, matched to the actual scope of the question
- Organize output exactly the way it was asked for — never consolidated for convenience
- Black and gold appears only for the Penthouse tier and its virtual tour access page — never general M.P. Productions materials
- Creative prompts must contain genuine, specific visual concepts — never placeholder language
- Any document likely to be revised carries a version number and a real date, visible on the document itself
- When told something is repetitive, lazy, or not what was asked for, the right response is to look again honestly and fix it — not explain why the original approach was reasonable

This same standard governs how Claude works on this project and is worth applying to Gemini's output too: verified, scoped, organized as asked, and self-corrected plainly when something's off.

12. Rock-a-Way — Real Origin History (2008-2011)

Rock-a-Way is not a new invented brand — it's a real, 18-year-old event series personally created and run by Duell Green, now being revived as the foundation of M.P. Radio.

- Began 2008 as a live reggae/dancehall show at Town Talk, Toronto, personally hosted by Duell Green, originally run under the business name "Connise Advertising" (predecessor to Duell Green's Inc / M.P. Productions)
- "Mr. Personality" appears as a real co-host name from this era (alongside main host "Maxi Million") — plausible real-world origin for the "M.P." in M.P. Productions and M.P. Radio, and for the separate "Mister Personality Productions" black-signature logo asset already on file
- Evolved into "Rock-a-Way Reloaded," a weekly themed series in 2010 at Sydney's Island Restaurant, Mississauga — themed weekly editions included Culture Edition, Diva Edition, Dancehall Edition, and Black History Edition, each with a different named host
- An extensive real multi-station community radio promo campaign ran weekly for months in 2010 across 89.5 FM (Morning Ride), CHRY 105.5 FM (Zion Train, Patrick Roots, Richard Banton, Carrie Mullings shows), Mr. Presto, Ron Nelson, and Baby G
- Continued into at least 2011 with "A Night of Musique" (292 College St, Toronto), co-promoted with partner promoter "Tux Ent."
- Recurring real artists/hosts across the campaign include Spoila (Ranks), Cyborg, Terminal, J-Logix, Petra, Lady Tremor, Kash, Semojrah Naki, Ritchie B, Otis I, Josey I, Junior Millar, Marc Trinidad, Ras I Him I, Dred Lee, DJ Champagne, Carrie Mullings, Richard Banton, Natty B, Jah International, King Majesty (Marvin Chin), Humble, Exco Levi, Keithy Ranks, and others
- Duell Green personally handled everything end-to-end across these projects (organizing, promotion, production, sponsor outreach, logistics) except performing as the artist, DJ, or host — and personally found and secured every sponsor
- Separate from Rock-a-Way: an annual Caribana float sponsorship project with a different theme each year — "Triple C" (Cancer, Connise, Clients) the first year, then "Kids United" (Innocence, Self Betrayal, Realization), then "Forgotten Treasures"
- The sponsor-tie-in model used then (local businesses trading ad placement for event sponsorship) is the same structural pattern as today's Market Guides coupon booklet approach
- Real assets on file: vintage promotional flyers, a real event ticket design (2011), and an audio file (rocks-F.mp3) — a genuine paper trail, not reconstructed history

13. "How I Trained My Claude" — Book Project

- Working title: "How I Trained My Claude," with a subtitle explaining the real premise (e.g. "Building a Real Business Empire, One Honest Conversation at a Time")
- Premise: not really about AI — about what was actually built (M.P. Productions, Market Guides, M.P. Radio, the label, etc.), with the AI conversation as the mechanism, not the point
- Real pre-AI origin material now confirmed: the entire Rock-a-Way / Connise Advertising history above (Section 12) — positions this as an 18-year real story being modernized, not a business that started with AI

- Preferred cover direction: a before/after split — one side sparse/empty, the other side full of the actual built world (market stall, DJ booth, studio)
- Doubles as the origin story for other planned content (a Teaching Curriculum, a diagnostic methodology, "The Trail," "Extreme Promotion")
- Planned chapter: the "money making money" concept and how it's been put to use in the business — details still to be provided
- Also considered: a video version, alongside or instead of a written chapter/book format

14. Apparel & Games — Additional Content

- Bible verse merch concept: geometric/galactic/collage-style design, using the Second Commandment as a creative constraint, KJV as the translation standard
- A specific original slogan preserved for one design: "Through Thick N From Thin / The Almighty Got Me / From / Within"
- The 20-apparel-design set has been refined with corrected Artistry settings per design; text-dependent designs were rebuilt as clean illustrations with real font recommendations
- Three language learning games exist: Spanish, Farsi, and Chinese, each with Beginner/Intermediate/Expert leveling and genuine lesson screens before quizzes
- The Chinese game was rebuilt using real pointer-event drag-and-drop, replacing an earlier broken native HTML5 implementation
- New children's content idea: a children's book about a young Philippine child who loves soccer. Part of a broader body of planned creative writing and movie-type content — not necessarily a formal series — covering many different demographics and economic backgrounds, all surrounding/set around Canada
- Considers a choose-your-language toggle feature (same illustrations, text/narration swaps by language) a genuinely superior, differentiating service for these children's books — technically simple, no backend required, the same category of build as the three existing language-learning games. Has not yet decided whether to build it

End of consolidated context. This document should be updated as the master execution plan and further decisions are finalized.
